

State of Louisiana – Technology Day

Agenda:

8:30 AM – 9:00 AM Intro/Overview

9:00 AM – 9:45 AM Session I – Management Cloud

The promise of the cloud is becoming a reality as organizations are moving beyond virtualization and simple Infrastructure-as-a-Service (IaaS). CA Technologies has responded to market demands and the needs of agencies by offering core IT Operations Management (ITOM) applications in the cloud. In this session we will present Project and Portfolio Management, Service Management and Enterprise Mobility Management, all offered as Software-as-a-Service.

9:45 AM – 10:00 AM BREAK

10:00 AM – 10:45 AM Session II – DevOps

What is DevOps? Simply put, it is the collaboration between developers (Dev) and IT operations personnel (Ops). DevOps is being driven by the adoption of Agile and other development methodologies and the increased rate of development of applications and mobile apps. CA Technologies supports agencies adopting DevOps with application development (AppDev) technologies like Service Virtualization and Release Automation. These development tools work hand in hand with operations application performance management and infrastructure management to provide continuous delivery.

10:45 AM – 11:30 AM Session III – Security

According to recent surveys, security continues to be the #1 or #2 obstacle to organizations deploying cloud and mobile applications. Security must become the enabler of applications without compromising protection. In this session we will discuss using Advanced Authentication as a means to enable mobile devices and protect users with Risk-Based Authentication. These technologies support the idea of Identity as the new perimeter. We will also discuss the rise of APIs and their role in the applications economy and how agencies can manage all of the new APIs. Finally, in this session we will cover how to protect back-end infrastructure with access control.

11:30 AM – 12:00 PM Q & A and Discussions

12:00 PM – 1:00 PM Networking Lunch
