

## Are You Ready to Handle "Bring Your Own Device" in Your Enterprise?

One of the top issues facing IT today is employees bringing their own devices to work - Blackberries, iPhones, Droids, iPads - and expecting the enterprise IT team to support them. We've heard from numerous companies that IT teams are feeling the pressure of added risk, complexity and lack of control.

Carousel Industries will tackle this topic in our upcoming session, which will feature best practices gleaned from real customer networks around:

- The questions you should ask before designing your integrated multi-device environment.
- How to duplicate a similar user experience regardless of the device employed (IM, Voice, voicemail, interfaces).
- Ways to simplify your management and administration of disparate protocols and devices. Ensuring message access and reliability.
- Creating reliable audit trails for employees using mobile phones.

### Event Details:

Tuesday, Feb. 7, 2012  
10:00 AM - 1:00 PM EST

### Location:

Capitol Park Welcome Center

---
